EDUCATION

Masters of Science - Computer Science

Florida International University

May 2026 - Present

Miami, FL

Bachelor of Arts - Computer Science

Florida International University

Jun 2022 - Dec 2025

Miami, FL

- Dean's List

SKILLS

Agent Orchestration

Claude API | OpenAI API | Hermes | Tool Calling | Prompt Engineering

MCP & Integrations

MCP Servers | Shopify API | Amazon API | Intentwise

Backend & Automation

Python | REST APIs | Cronjob Orchestration | Node.js | PostgreSQL

Infrastructure & Tooling

GitHub Repo Architecture | SSH Multi-user Workflows | Schema Validation | CI/CD

Frontend

React | Next.js | TypeScript | Tailwind CSS

EXPERIENCE

Zensah

May 2026 - Present

Agentic AI Engineer Intern

Miami, FL

- Leading a 3-person AI engineering team as the sole architect of all agent workflows and infrastructure — designed the GitHub repository structure, established SSH multi-user access with tmux session management, enforced strict schema validation, and owned the full pull request and code review process end-to-end.
- Designed and deployed Shopify SEO Blog Automation Agent using Hermes agent framework (OpenAI API) for orchestration and tool calling, with Claude API for SEO content and title generation: agents read live inventory, product prices, and performance metrics from Shopify API; identify high-performing and underperforming items; generate blog posts with Claude; fetch product and external stock imagery; and automatically publish to Shopify storefront on scheduled cronjobs.
- Built Amazon AI Agent integrated with intentwise MCP server for marketplace intelligence: agents ingest conversion rates, traffic data, and ad performance; target specific SKUs; update keywords and product listings; and optimize campaigns via Amazon API integration (currently in deployment).

Kontaktsource

Jun 2025 - Aug 2025

Fullstack Developer Intern

Miami, FL

- Re-architected a legacy WordPress platform into a modular, component-driven frontend using JavaScript and Tailwind CSS, improving maintainability and reducing turnaround time for client feature updates.
- Delivered performance-oriented UI enhancements across production client sites, supporting a 13% increase in client acquisition and a 60% improvement in user engagement metrics.
- Contributed to an end-to-end platform rewrite within a three-developer team by standardizing Git workflows, participating in pull request reviews, and maintaining code quality across shared repositories.
- Translated stakeholder requirements from 70+ clients into prioritized technical tasks, implementing frontend improvements targeting usability, responsiveness, and load performance.

PROJECTS

Macrotrue

Jan 2025 - Jan 2026

AI-driven SaaS Platform

- Architected and deployed a full-stack SaaS platform using Next.js and React with RESTful API endpoints, serverless infrastructure on Vercel, and structured JSON logging with per-request correlation IDs across all LLM routes.
- Integrated Groq API (LLaMA 3.3-70B) across two product surfaces: structured JSON meal generation with server-side schema validation and macro arithmetic, and a multi-turn conversational chatbot with dynamic prompt templating using the user's calorie goal and token usage tracking (cost/request).
- Implemented subscription billing with Stripe Checkout enabling tiered access control, daily chat quotas, and input guardrails including a message role allowlist to block prompt injection and character limits to prevent token-stuffing.
- Designed PostgreSQL schema with Drizzle ORM for users, workouts, subscriptions, and goals; deployed on Neon serverless infrastructure with runtime column detection for backward-compatible migrations.
- Developed secure authentication and route protection using Clerk with custom CSP headers; enforced IP-based rate limiting and PII-safe logging.
