Education

Florida International University

Masters of Science in Computer Science

May 2026 – Present

Miami, FL

Florida International University

Bachelor of Arts in Computer Science

Jun 2022 – Dec 2025

Miami, FL

- Dean's List

Experience

Zensah

Agentic AI Engineer Intern

May 2026 – Aug 2026

Miami, FL

- Led a 3-person AI engineering team and architected a production multi-agent LLM platform (Hermes, Claude) running 24/7 autonomous agents for Amazon ads analytics and Shopify blog generation — each an isolated process with its own runtime, system prompt, tool set, and OAuth credentials, supervised as macOS launchd daemons on a dedicated always-on host.
- Integrated the Intentwise Model Context Protocol (MCP) server with an 8-case routing table and multi-step tool calling to recommend cut/scale/keep actions on live campaigns against brand benchmarks (ACOS under 25%, TACOS under 15%); owned both agents end-to-end — delivering 18+ daily ad briefings and publishing 45+ SEO-targeted articles across two Shopify stores.
- Engineered a cache-first query strategy (30-day Supabase cache before live MCP fallback) to sharply cut LLM token spend; designed a persistent agent skills memory with structured-output guardrails and a no-fabrication data-gap protocol so agents accumulate learned patterns across sessions and never act on estimated data.
- Established the team's 24/7 infrastructure — a live git-worktree deploy model pinning production to main with symlinked skills/plugins, a self-hosted GitHub Actions runner performing path-filtered zero-downtime SIGUSR1 drain-and-respawn deploys under launchd KeepAlive, and tmux/SSH ops — and onboarded two interns onto the repo and pipeline.

Kontaktsource

Fullstack Developer Intern

Jun 2025 – Aug 2025

Miami, FL

- Re-architected a legacy WordPress platform into a modular, component-driven frontend using JavaScript and Tailwind CSS, improving maintainability and reducing turnaround time for client feature updates.
- Delivered performance-oriented UI enhancements across production client sites, supporting a 13% increase in client acquisition and a 60% improvement in user engagement metrics.
- Contributed to an end-to-end platform rewrite within a three-developer team by standardizing Git workflows, participating in pull request reviews, and maintaining code quality across shared repositories.

Projects

Macrotrue | *Next.js, React, TypeScript, PostgreSQL, Stripe, Groq API*

Jan 2025 – Jan 2026

- Architected and deployed a full-stack SaaS platform using Next.js and React with RESTful API endpoints, serverless infrastructure on Vercel, and structured JSON logging with per-request correlation IDs across all LLM routes.
- Integrated Groq API (LLaMA 3.3-70B) across two product surfaces: structured JSON meal generation with server-side schema validation and macro arithmetic, and a multi-turn conversational chatbot with dynamic prompt templating using the user's calorie goal and token usage tracking (cost/request).
- Implemented subscription billing with Stripe Checkout enabling tiered access control, daily chat quotas, and input guardrails including a message role allowlist to block prompt injection and character limits to prevent token-stuffing.

Technical Skills

Agent Orchestration: Claude API, OpenAI API, Hermes, Multi-Agent Systems, Tool Calling, Prompt Engineering, Agent Memory

MCP & Integrations: Model Context Protocol (MCP), Shopify API, Amazon API, Vercel AI SDK

Backend & Networking: Python, OpenAI-Compatible APIs, REST, ETL Pipelines, Node.js, PostgreSQL, Supabase

Infrastructure & DevOps: SSH/tmux, GitHub Actions CI/CD, Cron Orchestration

Frontend: React, Next.js, TypeScript, Tailwind CSS
