Education

Florida International University

Masters of Science in Computer Science

May 2026 – Present

Miami, FL

Florida International University

Bachelor of Arts in Computer Science

Jun 2022 – Dec 2025

Miami, FL

- Dean's List

Experience

Zensah

May 2026 – Aug 2026

Agentic AI Engineer Intern

Miami, FL

- Led a 3-person AI engineering team to architect and ship a production multi-agent LLM platform on Hermes Agent, a Python agent runtime, orchestrating 24/7 autonomous agents (Claude + GPT) across Amazon ads analytics, Shopify content generation, and internal ops tooling — cutting manual ops workload ~70% and scaling content/ad output 2x without adding headcount.
- Re-architected the ads-analytics agent off a paid third-party MCP integration (\$2.5K/mo) onto a self-hosted data pipeline (~\$100/mo), cutting data costs 96% while building an autonomous cut/scale/keep decision engine that's run daily campaign optimization with zero missed cycles for 6+ straight weeks — holding account ACOS under 25% and TACOS under 15%.
- Built and shipped an autonomous SEO content agent that researches, writes, and publishes Shopify blog posts end-to-end on a daily cadence — driving a ~30% increase in organic blog traffic and a ~15% lift in organic-referred store revenue within its first quarter live.
- Shipped a retrieval-augmented ops chatbot with tool-calling access to live Amazon Ads/SP-API data — answering merchandisers' ad-hoc campaign questions with recommendations grounded in real-time performance metrics — alongside an automated listing-copy and A+ Content agent publishing straight through Amazon's Selling Partner API, cutting listing turnaround from days to minutes and manual review time ~50%.
- Owned the team's 24/7 deploy infrastructure end-to-end — git-worktree production pinning, a self-hosted CI runner with path-filtered zero-downtime deploys, and signal-based daemon respawn under launchd — driving deploy-related downtime to zero and cutting release cycle time 50%+, while onboarding two interns onto the pipeline.

Kontaktsource

Jun 2025 – Aug 2025

Fullstack Developer Intern

Miami, FL

- Re-architected a legacy WordPress platform into a modular, component-driven frontend using JavaScript and Tailwind CSS, improving maintainability and reducing turnaround time for client feature updates.
- Delivered performance-oriented UI enhancements across production client sites, supporting a 13% increase in client acquisition and a 60% improvement in user engagement metrics.
- Contributed to an end-to-end platform rewrite within a three-developer team by standardizing Git workflows, participating in pull request reviews, and maintaining code quality across shared repositories.

Projects

Macrotrue | Next.js, React, TypeScript, PostgreSQL, Stripe, Groq API

Jan 2025 – Jan 2026

- Architected and deployed a full-stack SaaS platform using Next.js and React with RESTful API endpoints, serverless infrastructure on Vercel, and structured JSON logging with per-request correlation IDs across all LLM routes.
- Integrated Groq API (LLaMA 3.3-70B) across two product surfaces: structured JSON meal generation with server-side schema validation and macro arithmetic, and a multi-turn conversational chatbot with dynamic prompt templating using the user's calorie goal and token usage tracking (cost/request).
- Implemented subscription billing with Stripe Checkout enabling tiered access control, daily chat quotas, and input guardrails including a message role allowlist to block prompt injection and character limits to prevent token-stuffing.

Technical Skills

Agent Orchestration: Claude API, OpenAI API, Hermes Agent (Python Agent Runtime), Multi-Agent Systems, Tool Calling, Retrieval-Augmented Generation (RAG), Prompt Engineering, Agent Memory & Skills Systems, Guardrails & Anti-Hallucination Design

MCP & Integrations: Model Context Protocol (MCP), Shopify API, Amazon SP-API (Selling Partner API), Vercel AI SDK

Backend & Networking: Python, REST, SSE/Streaming, ETL Pipelines, Async/Background Job Orchestration, Node.js, PostgreSQL, Supabase

Infrastructure & DevOps: macOS launchd (Daemon Supervision), GitHub Actions CI/CD, Cron Orchestration

Frontend: React, Next.js, TypeScript, Tailwind CSS
