Education

Florida International University

Master of Science in Data Science and Artificial Intelligence

May 2026 – Present

Miami, FL

Florida International University

Bachelor of Arts in Computer Science

Jun 2022 – Dec 2025

Miami, FL

- Dean's List

Experience

Zensah

Aug 2026 – Present

Agentic AI & Platform Engineer (Part-Time Contract)

Miami, FL

- Own the approval-gated Amazon Ads bid and negative-keyword tools the ads team applies changes through, with per-campaign target ACOS, spend-weighted blending, and one-click revert; Zensah account ACOS fell ~10% over the summer.
- Rebuilt a Zensah Shopify product page as a reusable, metafield-driven conversion PDP (Liquid/JS) with a browser snapshot test harness, lifting that page's conversion rate roughly 40% over the following five weeks against a flat site-wide baseline; additional products have since moved onto the template.
- Turned the dashboard's streaming AI chat into a connected analyst with grab-and-ask on any page, deep links, and five live data tools (Shopify, Google Ads, Search Console, GA4, Amazon); cut model round trips per turn 54% and halved latency.
- Joined Search Console, Shopify, Google Ads, and Amazon on a shared product key, giving the dashboard's AI agent one place to cross-reference a single product's Amazon and Google ad campaigns, search terms, and sales performance across both platforms — answering questions no single platform's own dashboard can — and powering an Attribution Center and automated fee-anomaly alerts.

Zensah

May 2026 – Aug 2026

Agentic AI & Platform Engineering Intern

Miami, FL

- Built Zensah's AI and data platform from an empty repo on a three-engineer team: a Next.js/Supabase Amazon growth dashboard (40 pages, 327 migrations, 215 tests) and a Hermes multi-agent runtime with 4 agents in production; 540+ merged PRs.
- Replaced a paid analytics vendor with a self-hosted Amazon SP-API and Ads API to Supabase pipeline (Python, launchd, reconciliation job), cutting projected analytics spend ~95%; the platform's Amazon and off-Amazon syncs now move ~470K rows per run across ~50 feeds.
- Shipped the first approval-gated Amazon Ads live-write tools (bids, negatives, budgets) and a streaming LLM Copy Generator grounded in search-term data that has pushed ~180 fields to live Amazon listings via SP-API.
- Launched four autonomous production agents: an Amazon analytics agent with daily morning briefings, a Google Ads manager Telegram bot with hard spend guardrails that lifted ROAS about 20% while cutting spend 14%, a Shopify blog SEO agent, and a creative studio agent, each running as a supervised gateway daemon.

Kontaktsource

Jun 2025 – Aug 2025

Full-Stack Developer Intern

Miami, FL

- Re-architected a legacy WordPress platform into a modular, component-driven JavaScript and Tailwind CSS frontend, reducing turnaround time for client feature updates.
- Delivered performance-oriented UI enhancements across production client sites, supporting a 13% increase in client acquisition and 60% improvement in engagement metrics.

Technical Skills

Languages: TypeScript, Python, SQL, JavaScript

AI / Agents: Claude API, OpenAI API, Vercel AI SDK, Tool Calling, RAG, Multi-Agent Systems, Agent Memory, Prompt Engineering, Guardrails, Model Context Protocol

Backend / Data: Next.js, Node.js, REST APIs, PostgreSQL, Supabase, ETL Pipelines, Streaming (SSE)

Integrations: Amazon SP-API, Amazon Ads API, Shopify Admin API, Google Ads API, GA4, Google Search Console, Stripe

Frontend: React, Tailwind CSS, TanStack Query, Recharts, Shopify Liquid

DevOps: GitHub Actions (CI/CD, Self-Hosted Runners), Vercel, launchd, Vitest
